Faucet Features

ANTI RUST MATERIALS

Faucets Body are made of the purest Brass. So it resist to soft water corrosion and Hard-water calcification.

Cartridges and spindles tested for over 5 lakh cycles, assuring long life of faucets.

LONG LAST SHINING

Faucet plated with 3 layers of nickel metal and chrome metal (2:1) that gives long lasting shine.

Good Customer Relation, Quick Delivery

SOFT MOVE

Special cartridges to ensure smooth movement of single lever faucets.

Faucets with aerated flow technology for delivering uniform flow of water that feels smooth and soft

Eco-friendly faucets with water saving cerators.

SPINDLE TECHNOLOGY OF ACURA

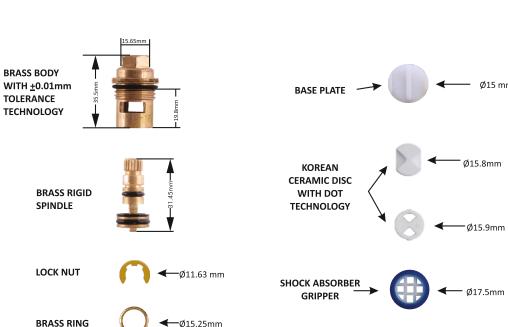

Acura's Ceramic Cartridge is top-class in the world, whi

Ceramic Cartridge is top-class in the world, which is with fine quality for unvarying utilizing with quality ensured through 100% Water snugness tried submerged weight. The unbending nature of the cartridge are high, Even under utilizing condition with flimsy water weight, Performancing life 5,00,000 working circumstances are ensured. All the metal parts of the inner cartridge, are made of extruded brass rod guaranteeing perfect execution for a more drawn out period.

Main Material : Brass Water Pressure : 4 Bar Standars: 1/2"

GENERAL INSTRUCTION

- Use 25mm pipes rather than 20mm pipes to ensure better water flow and to overcome reduction in diameter of pipeline due to scaling inside the pipeline. For better performance of the product, we recommended water pressure should be between 2.5 bar to 3 bar.
- Keep the minimum number of bends in the pipeline and make it travel straight and vertical as far as possible.
- All the supply must have vent pipes. These vent pipes help in removing air locking in the water supply to give a flow of water from the fittings.
- Test the working of all the concealed fittings installed on a high pressure for leakage before plastering or fixing the line.
- Clean the aerators provided in the items at regular intervals for a perfect foam flow of water from the fittings.
- Place the outlet point in the overhead tank at least 25cm above the ground level of the tank. this prevents the flow of the working parts.
 Clean the tank thoroughly before the supply starts. It is suggested that the overhead tank must be cleaned at regular interval to avoid deposition of foreign particles.
- Do not use strong harsh cleaning agents containing abrasive, acids detergents as this may cause damage to the chromium finish.
- To protect the finish from fittings from dirt stains and other damages, cover them with cloth/polypack after their installation till they
 come into actual use.
- It is suggested that center to center distance for hot and cold inter for all type of wall mounted mixers should be maintained at 165mm in which case any of our wall mixers from different ranges can be easily installed without any problem.
- Insist on genuine spares from the company's local service center or its authorised stockist in case of repair or replacement.
- For any type of technical or service assistance, please contact the nearest ACURA branch, dealer, or area representative.
